Adding Observations in Florida SHOTS

Florida SHOTS uses "**Observations**" to document contraindications and precautions to receiving certain vaccinations. In addition, users can add risk factors as observations to indicate non-routine administration of vaccines. When recorded, these observations will influence patient immunization schedules, forecasting, and Reminder/Recall reports. The following describes how to document commonly used observations in the patient record. First complete the "**Patient Search**" and load the patient's record.

ADDING HISTORY OF VARICELLA (CHICKENPOX) DISEASE:

1. Click the "Observations" menu item on the left to open the "Observation List" page. Select "Add New Observation" button.

Submit	Observation List				Training Environm
User: DEASHJA PADIN	Description	Expires	Туре	Applies To	Delete?

ADDING RISK FACTORS TO OBSERVATIONS:

Based on certain risk factors such as underlying medical conditions or proximity to an outbreak, some patients will need non-routine vaccines. In these cases, Florida SHOTS requires risk factor observations to be added to the patient record to appropriately evaluate and forecast doses.

For certain vaccines, such as meningococcal B, Florida SHOTS will recognize the administration of the first dose of MenB (Bexsero or Trumenba) and will automatically add the risk factor observation to the patient record and forecast accordingly. Alternatively, users may manually add risk factor observations, before adding such vaccinations.

To add an observation manually, perform the following steps:

1. Click the "Observations" menu item on the left to open the "Observation List" page. Select "Add New Observation" button.

						A	
Submit	Observation List					•	Training Environ
User: DEASHJA PADIN	Description		Expires	Туре	Applies To		Delete?
